

Training Day 19 Daily Dairy

july-4

Topics Covered:

- Prepared Django applications for deployment by setting up environment variables, database configurations, and static files.
- Deployed Django projects to cloud platforms such as **Heroku, AWS, or DigitalOcean**.
- Set up production-ready environments with database migrations, static files, and security settings (e.g., HTTPS, security headers).

Key Learnings:

- Learned the process of deploying Django applications in production environments.
- Gained practical experience in setting up and configuring production servers for a live application.
