Training Day 10 Daily Dairy
june-21

Topics Covered:

- Introduction to **Model Forms**, a quick way to create forms directly from Django models.
- Explored how to auto-generate forms based on model fields.
- Customized form fields and added validation rules.
- Worked on handling form submissions in views and saving data to the database.
- Created form templates to display and process form data.

Key Learnings:

- Understood how to streamline form creation using **Model Forms**, which reduces manual coding.
- Applied custom validation and error handling to ensure data integrity.
