Training Day 17 Daily Dairy
july-2

- Topics Covered:
    - Implemented token-based authentication using DRF's built-in authentication mechanisms.
    - Set up permission classes (`IsAuthenticated`, `IsAdminUser`, `AllowAny`) to control access to API endpoints.
    - Worked with Django's `User` model to authenticate API requests using tokens.
    - Learned how to restrict certain actions based on user roles and permissions in the API.
- Key Learnings:
    - Secured API endpoints using token-based authentication.
    - Implemented permission-based access to protect sensitive data and restrict access to authorized users only.
