Training Day 9 Daily Dairy
june-20

Topics Covered:

- Introduced advanced model queries using Django's ORM.
- Learned to use methods like `filter()`, `exclude()`, and `get()` for complex lookups.
- Practiced using `Q` objects to construct complex queries involving AND, OR conditions.
- Explored querying across related models using double underscore (`__`) notation (e.g., `category__name`).
- Performed aggregations and annotations using `annotate()` and `aggregate()` to calculate counts, sums, averages, etc.

Key Learnings:

- Mastered advanced querying techniques using the Django ORM.
- Efficiently queried related models and performed calculations on model data.
