Training Day 1 Daily Dairy
june-5

Task accomplished

Introduction to Django Framework:

- Brief overview of what Django is and its key features.
- Understanding the advantages of using Django (e.g., scalability, security, rapid development).

Setting up the Development Environment:

- Installed Python (verified with python --version).
- Installed Django using pip (pip install django).
- Verified Django installation by checking the version (django-admin --version).

Creating a New Django Project:

- Created the first Django project using the command django-admin startproject mysite.
- Explored the project structure and understood the purpose of each file (e.g., settings.py, urls.py, manage.py).

Running the Development Server:

- Used the command python manage.py runserver to start the development server.
- Accessed the default Django welcome page at http://127.0.0.1:8000/.
